

# WEB SCRAPING AND ANALYSIS OF TOP MUTUAL FUNDS

## Minor Project Report

---

### Data Source

Yahoo Finance – Top Mutual Funds

---

### Made By

**Name:** Tamanna

**Roll Number:** 8524254

**Branch:** Computer Science & Engineering(AIML)

**Semester:** 4th

**Academic Session:** 2025-26

---

### Institute

## JMIETI Engineering Institute

---

### Organized By

**Company Name:** codroidHub

---

### Technologies Used

- Python
- Requests
- BeautifulSoup
- Pandas
- SQLite
- Jupyter Notebook
- Matplotlib

## Project Overview

This project focuses on extracting mutual fund information from Yahoo Finance using Web Scraping techniques.

The collected data is transformed into a structured format, stored in a database, and analyzed to generate meaningful insights about mutual fund performance.

---

## Objectives

- ✓ Extract mutual fund data automatically
- ✓ Convert unstructured HTML into structured datasets
- ✓ Store data using SQLite Database
- ✓ Perform data cleaning and preprocessing
- ✓ Analyze mutual fund performance metrics
- ✓ Visualize financial insights using charts

## Introduction

Web Scraping is a technique used to automatically collect data from websites.

Financial websites contain a vast amount of valuable information that can be leveraged for analysis and decision-making. In this project, mutual fund data is extracted from Yahoo Finance and converted into a structured dataset for further analysis.

The project demonstrates the complete Data Engineering workflow, including:

- Data Collection
- Data Processing
- Data Storage
- Data Analysis
- Data Visualization

using Python and its powerful ecosystem of libraries.

## Importing Libraries

```
In [9]: from bs4 import BeautifulSoup
import pandas as pd
import requests
```

## HTTP Request

```
In [10]: url = "https://finance.yahoo.com/markets/mutualfunds/top/"  
response = requests.get(url)
```

## Adding Header

```
In [11]: headers = {  
        'User-Agent' : 'Mozilla/5.0(Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (  
        }  
}
```

## Getting Response

```
In [12]: response = requests.get(url, headers=headers)  
response
```

```
Out[12]: <Response [200]>
```

## Accessing the code

```
In [13]: soup = BeautifulSoup(response.content, 'html.parser' )  
soup
```

Out[13]: <!DOCTYPE html>

```
